Part II.

SUBSTANCE OF INTERVIEW DESCRIBING THE GENERAL NATURE OF WHAT WAS DISCUSSED:

Ms. Flener was contacted to discuss potential allowable subject matter. The Examiner indicated that the Declaration filed by Applicants on 21 July 2010 suggested unexpected results in which the 5'-laurate ester of riboflavin was significantly less cytotoxic than the corresponding longer and shorter ester derivatives. However, the Examiner indicated that the data for unexpected results was not commensurate in scope with the claims. The Examiner queried whether Applicants would be able to provide similar data of potential unexpected results that were commensurate in scope with the claims. Ms. Flener indicated she would discuss the request with Applicants. Although not specifically discussed in the interview with Ms. Flener, the data provided by Applicants for showing unexpected results tested 120 umol/L and 240 umol/L of the monoester compounds. However, the claims are drawn to compositions comprising 50-150 mg of the laurate monoester in 0.1-1 mL of ethyl oleate and 0-1 mL of camellia oil. The lowest concentration claimed is therefore 50 mg of the laurate monoester in 0.1 mL of ethyl oleate, a concentration of 890 mM.

Part III.

☐ It is not necessary for applicant to provide a separate record of the substance of the interview, since the interview directly resulted in the allowance of the application. The examiner will provide a written summary of the substance of the interview in the Notice of Allowability.

☐ It is not necessary for applicant to provide a separate record of the substance of the interview, since the interview did not result in resolution of all issues. A brief summary by the examiner appears in Part II above.
